

TRANSCRIPT PREPARED BY THE CLERK OF THE LEGISLATURE
Transcriber's Office
FLOOR DEBATE

April 29, 2003

LB 407

talk about one small number, because it's got to be one that all of us keep in mind, and that's 5--the difference between 25 and 30 votes. Because the difficulty that we have is the difference between where the Governor is in his budget and where the Appropriations Committee is in their budget, and how we are going to rectify that difference, outside of just letting the Governor veto whatever he wants. And so I think that as we discuss anything today about the appropriations, we should be trying to figure out how we're going to vote. And if we vote to make it 25, we better be willing to vote to make it 30. But the big numbers that I wanted to talk about...and it's following up a little bit on what Senator Brashear started talking about...are the numbers...the drivers that have led us to where we are, and what we have done to control those costs. Because I agree in many respects with some of the things that the Appropriations Committee members have talked about, in terms of being responsible about our commitment to higher education, which has been one of the areas that has not grown at the same rate as some of our other areas. But if you...even if you just disassociate yourself with what we've been...what areas have been growing, if you...if we look at the rate and look at what has happened in terms of our pie, and where we may end up if we don't...if the adjustments don't keep being made on the smallest piece of the pie. We have one part of the pie that has quadrupled in the last 13 years. Senator Wehrbein talked about Medicaid growing at 15 to 18 percent a year. And yet, we very reluctantly made some changes during special session, and only addressed a very small piece of that, and really did not address the eligibility that really might impact those growth numbers, or the array of services that we pay for that might affect those growth numbers. And so if you look at those kinds of numbers and then look at our ability to sustain those, we're not going to...we are not going to be able to continue in the same vein that we have been without substantially increasing taxes. Now, in terms of the numbers, the reliability of the numbers for the out years, Senator Raikes very validly said that over a period of time, that we do get to the 5 percent number. But over the last few years, prior to the bottom dropping out, we were growing our spending, and our revenues were growing at 7 percent, and we kind of became reliant on that 7 percent.
